

ADIDAS SALES ANALYSIS DASHBOARD REPORT

Project Overview

This project analyzes Adidas US sales performance using Power BI. The dashboard provides insights into sales, profitability, product performance, regional distribution, and retailer contribution. The objective is to identify key business trends and support data-driven decision making.

Dataset Information

- Dataset Name: Adidas US Sales Dataset
- Total Records: 9,648
- Time Period: January 2020 – December 2021
- Number of States: 50
- Number of Retailers: 6
- Sales Channels: In-store, Online, Outlet

Dataset Fields

- Retailer
- Invoice Date
- Region
- State
- City
- Product
- Price per Unit
- Units Sold
- Total Sales
- Operating Profit
- Operating Margin
- Sales Method

Dashboard KPIs

Total Sales

- \$900 Million

Operating Profit

- \$332 Million

Units Sold

- 2 Million

Average Price per Unit

- \$45

Operating Margin

- 42%

Visualizations Used

1. Monthly Sales Trend

A line chart was used to analyze monthly sales performance and identify seasonal trends.

2. Sales by State

A map visualization was used to display geographic sales distribution across the United States.

3. Sales by Region

A donut chart was used to compare sales contribution from different regions.

4. Sales by Product

A bar chart was used to identify top-performing Adidas product categories.

5. Sales by Retailer

A horizontal bar chart was used to compare retailer performance and revenue contribution.

Key Insights

Sales Performance

- Total revenue exceeded \$900 million.
- Monthly sales showed fluctuations throughout the year.
- Peak sales were observed during mid-year and year-end periods.

Profitability

- Adidas generated approximately \$332 million in operating profit.
- Operating margin remained strong at 42%, indicating efficient business operations.

Regional Analysis

- The West region generated the highest sales contribution.
- Northeast and Southeast regions also contributed significantly to overall revenue.

Product Analysis

- Men's Street Footwear emerged as the highest-selling product category.
- Women's Apparel and Men's Athletic Footwear also performed strongly.

Retailer Analysis

- West Gear generated the highest sales among all retailers.
- Foot Locker and Sports Direct were major contributors to overall revenue.
- Walmart and Amazon contributed comparatively lower sales.

Geographic Analysis

- Sales were distributed across all major US states.
- Several states demonstrated significantly higher revenue generation than others, indicating strong market demand.

Business Recommendations

1. Increase inventory and marketing efforts for top-performing product categories.
2. Focus expansion strategies in high-revenue states and regions.
3. Strengthen partnerships with top-performing retailers.
4. Improve sales performance in underperforming regions through targeted promotions.
5. Continue monitoring monthly sales trends to optimize seasonal campaigns.

Conclusion

The Adidas Sales Analysis Dashboard provides a comprehensive overview of sales, profit, products, retailers, and regional performance. The dashboard enables stakeholders to quickly identify trends, evaluate business performance, and make informed strategic decisions. Power BI visualization techniques helped transform raw sales data into meaningful business insights.
